DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 22-26, drawn to a semiconductor device, classified in class 257, subclass 777.
- II. Claims 12-21, drawn to a method of making a semiconductor device, classified in class 438, subclass 106.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the semiconductor device can be made using a materially different process. The semiconductor device can be made without the active circuitry attached to the first die and the stacked die can be secured to each other without the use of a spacer but instead may be secured using an adhesive or conductive epoxy.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
